

Group Project

Project 01: Build a Responsive Web Page from a pre-designed Mock-Up

Course Value: 90%

Due: End of day, November 17, 2015

Instructions:

- 1.) With your teammate (groups shown below), select one of the three pre-designed mock-ups located in the mock-ups folder
- 2.) Create a fully working responsive web page using HTML/CSS and JavaScript that matches as closely as possible to the design of the mock-up that was selected in step 1
- 3.) All your code should be version controlled and stored in your group's repository on Github
- 4.) Your Github repository should contain the following two files in the root directory:
 - a. README.md file which is a Markdown file which describes your project
 - b. .gitignore file which tells Git what files to ignore when version controlling your repository
- 5.) The instructor will mark the latest version of your project that is stored in your group's repository on Github. No need to upload this project to your portfolio site

Notes:

- This is a team project. Both team members will receive the same mark
- All your code and assets (images) should be stored on Github
- Use proper semantic tags, do not just use divs everywhere. Higher marks will be awarded to those groups that use proper semantic tags
- The web site should have a working mobile menu system
- Inside the individual mock-up folders there are animated gifs which show how the mobile menu should function. There are also animated gifs which show how the web site re-flows from desktop to mobile. Use these animated gifs as a reference. Groups that build responsive menus that closely match the responsive menu systems shown in the gifs will score higher
- The more closely your web site matches to the supplied mock-ups the higher your mark
- Inside some of the mock-ups folders for the individual sites you will also find some text copy that is to be used on the web site. For Lorem Ipsum text content any lorem ipsum text will do.
- The individual mock-up folders also contain a fonts folder with information on the fonts used on each mock-up
- The individual mock-up folders also contain an images folder with individual images that can be used in the finished web site
- Use the open lab days wisely, do not leave this project to the last minute

Marking Criteria:

- | | |
|---|------------------|
| - All instructions followed | 10 marks |
| - Proper semantic tags used | 10 marks |
| - Functioning responsive menu system that matches the mock-up | 10 marks |
| - Responsive web page that matches the mock-up | 70 marks |
| - Total | 100 marks |

Groups

Group 01 – Lorraine, Emilio

Group 02 – Wilson, Jeremy

Group 03 – Natalya, Asako

Group 04 – Deng, Aaron

Group 05 – Cory, Julian

Group 06 – Maisha, Farley

Group 07 – Ryan, Chris

Group 08 – Genevieve, Brooklynn
